NIRAJ KUMAR SINGH

Ghaziabad, Uttar Pradesh, India | +91-9241684244 | nirajsingh0925@gmail.com | github.com/niraj2908 | linkedin.com/in/nirajkumarsingh

PROFESSIONAL SUMMARY

Pre-final-year Computer Science undergraduate with hands-on experience in SQL-based data modeling, data analysis, and application development using PostgreSQL, Python, and Next.js. Built and deployed 3 production systems analyzing 500+ customer records and 2,100+ transactional events, applying segmentation and experiment-based measurement to support business decisions. Comfortable writing and debugging queries and communicating findings to non-technical stakeholders under deadline pressure.

TECHNICAL AND ANALYST SKILLS

- Languages and Query Tools: SQL, Python, C++, JavaScript (ES6+), TypeScript
- Databases and Data: PostgreSQL, MySQL, MongoDB, Relational Data Modeling (Prisma ORM), Data Cleaning and Validation, Query Optimization, Redis
- Analysis and Reporting: Data Analysis, Customer Segmentation, KPI and Trend Analysis, A/B and Control-Treatment Experiment Design, MS Excel
- Application Development: React.js, Next.js, Node.js, FastAPI, Express.js, REST APIs, Data Structures and Algorithms, OOP
- Business and Consulting Skills: Business Analysis, Problem Solving, Requirements Gathering, Stakeholder Communication, Team Collaboration, Project Coordination
- Tools and Practices: Git, GitHub, Docker, Cloud Deployment (Vercel), Postman, Unit Testing, CI/CD Basics

PROJECTS

Revenue Recovery Intelligence Agent, Razorpay AI Buildathon 2026 (Track 3: AI Revenue Recovery) *2026*

Next.js, TypeScript, FastAPI, Python, PostgreSQL, Redis, Vercel

- Independently designed and built an AI agent that evaluates at-risk payment events and decides whether intervention creates incremental economic value, selecting 1 of 4 actions: retry, payment link, wait, or escalate.
- Executed recovery actions through the Razorpay platform and measured incremental GMV impact using a control-versus-treatment experiment design.
- Applied uplift modeling and counterfactual analysis to avoid double-counting recoveries that would have occurred anyway, addressing data leakage and calibration in the decision logic.

Xeno CRM, Customer Data Analytics and Segmentation Platform *Mar 2025*

PostgreSQL, SQL, Prisma ORM, Next.js, TypeScript, Groq API (Llama 3.3 70B), Docker, Vercel

- Designed a relational schema and wrote SQL queries in PostgreSQL and Prisma ORM to model, clean, and analyze 500+ customer records and 2,100+ transactional events, supporting segmentation and business-insight generation.
- Built rule-based and natural-language segmentation logic across 3 segment categories, grouping customers by purchase behavior for targeted business decisions.
- Integrated an LLM (Groq API, Llama 3.3 70B) into the data pipeline to auto-generate plain-language insights from verified query outputs.

Customer Analytics Dashboard, Business Metrics Visualization *May 2025*

React.js, JavaScript, Recharts, Tailwind CSS, Vercel

- Built a real-time dashboard with 3 chart types (line, bar, pie) visualizing revenue, customer activity, and trend data, structured into reusable React components.

EXPERIENCE AND LEADERSHIP

Technical and Event Organizer, SRM Institute of Science and Technology *2024 - 2025*

- Organized 5+ technical events, hackathons, and tournaments with 20 to 50 participants each, managing registrations, scheduling, and execution.
- Won 1st place at Ideathon 2026 with Arogyavan AI, collaborating in a cross-functional team to scope an ambiguous problem into a buildable system design and pitch it to a judging panel.
- Collaborated with the GeeksforGeeks Campus Ambassador team to promote coding contests and technical sessions.

EDUCATION AND CERTIFICATIONS

SRM Institute of Science and Technology, Delhi-NCR *2023 - 2027*

- Bachelor of Technology, Computer Science and Engineering. CGPA: 8.01 out of 10. Ghaziabad, Uttar Pradesh.
- Certifications: Meta Front-End Developer. JPMorgan Chase Software Engineering Simulation (Forage). NPTEL Natural Language Processing.
